

Outsmart Your Strainer

Detect when maintenance is
needed to prevent downtime.

Differential pressure monitoring now available on Mueller duplex & wye strainers.

- Proactively perform strainer maintenance
- Protect costly equipment from damage
- Maintain consistent flow and efficient system performance
- Receive alerts via a wired or cellular connection

Add Differential Pressure Monitoring to Your Strainer

Ready to Connect?

Your new strainer arrives with a connection-capable sensor. This sensor is turned on with the purchase of an add-on Connection Kit. Once you've purchased, installed, and activated your Connection Kit, you'll receive real-time alerts that keep you ahead of slow performance, damaged equipment and production downtime.

How it Works

- 1 Install your strainer as usual and find your Connection Kit
- 2 Purchase and install your Connection Kit to activate the differential pressure monitoring technology
- 3 Enjoy reliable pressure monitoring and alerts via a wired or cellular connection with Syncta, the mobile app from Watts or your BAS/BMS.
